RE: GRAD CERTIFICATION

Dear Guy,

This letter will address current electric service for the Park 53 Industrial & Technology Complex to assist you with your GRAD certification application. Georgia Power currently has a 115kv transmission line and 3 phase distribution service available approximately 1.6 miles northwest of the Park 53 site. These services could be built to the site within 6-9 months of the customer request. Significant capacity is available on these systems. Specific load information will be needed to identify firm timelines and to determine if any system upgrades would be required.

Should you need any clarification and additional information, please do not hesitate to call.

Sincerely,

A handwritten signature in black ink, appearing to read "Rope Roberts". The signature is fluid and cursive, with a large initial "R" and "R".
